# A NEW VERSION OF PERIMETRIX SAFE SPACE

---

## Expanding the Security Landscape

Perimetrix announces the 2.8 release of Perimetrix SafeSpace, the classified data security system, now with new and expanded capabilities →

### SafePrint Component

This new Perimetrix component is responsible for marking printed copies of confidential files with the appropriate classification information. If a file being printed contains confidential information, SafePrint will make sure that the hard copy contains the necessary, distinctive classification information.

### Transferring Cryptocontainers

With the new release of SafeSpace, the exchange of encrypted data within a distributed installation is now seamless. Both the sender and the receiver now use the same configuration settings to access the data.

The new features of Perimetrix SafeSpace available in version 2.8 are yet another step towards meeting the desires of our customers and partners. The transparent exchange of cryptocontainers between companies primarily requires holding environments to facilitate the transfer of confidential data. Moreover, policies related to processing and storage are applied automatically as defined and configured among the companies. The SafePrint module bridges the gap between electronic and physical document workflows. Regarding hard copies of confidential documents, they are automatically marked during the printing process with things like the original source and copyright information.

## SafePrint in Use

In addition to marking printed copies with identifying information, SafePrint allows you to fully manage the entire printing process of confidential files. Automatic printing of „watermarks“ and other necessary information allows you to not only have an auditable trace of a printed file, but also to ensure effective protection of copyrighted and intellectual property. When a document gets into your hands, you can always track its history, right down to the workstation from which it was printed.

We continue developing Perimetrix, ensuring that the methods used are continuously and consistently based on domestic and international best practices. We are pleased to present version 2.8, and are thoroughly convinced of the relevance and importance of everything that we can achieve together.

*Evgeny Preobrazhensky*  
Perimetrix CEO

## User Experience

We are constantly working to enhance the usability of our products. In the latest version, we have made a number of improvements. Confidential files can now be opened in a way that is more natural to the user; simply by double-clicking on a file icon instead of going through the file menu, as was done in previous versions

 *Perimetrix® version 2.8 was released in November 2020 and is available to all of our customers and partners*

## About Perimetrix

Perimetrix, founded in 2007, develops unique solutions for safeguarding confidential data. Unlike its competitors, Perimetrix focuses its innovative approach, unique expertise and high potential on creating a corporate platform for managing information security. Moreover, Perimetrix® solutions can be integrated with existing business processes, as well as the organizational and technical infrastructure of the customer.
